SCIENTIFIC CONTRIBUTION TO BENEFIT THE MASSES

For technology and science to impact the masses, it has to extend itself to become more multidisciplinary and its practitioners should continue to promote cooperation and integration between pure and applied branches.

The research work done by Dr. Sr. Jasintha Quadras integrates the pure concepts of Mathematics with interconnection networks, which is widely applied in various fields. Programming of machinery including automation incorporates the basic principles extensively dealt in nanotechnology and in space exploration towards climatic forecast and studies in global warming.

The concept of embedding has major applications in the field of communication and networking. Further, pharmaceutical industry widely applies graph theory in its chemical formulations in research and development of new drugs to combat resistant mutant varieties of viruses.

The logistics of distribution and optimal layout of plant and machinery in industries enabling minimization of waiting lines and increase in productivity can also be achieved through application of the theoretical principles extensively analyzed in this research.
